Decorin (or PGII or PG-40) is a proteoglycan having a 40 kDa core protein. Recombinant decorin can be produced by cotransfection of CHO-DG44 cells with pSV2-decorin and pSV2dhfr. Large-scale cultures can be performed using CHO cells attached to microcarrier beads. The recombinant protein is purified from the cells using beads. The recombinant protein is purified from the cells using beads the recombinant protein is purified from the highly sensitive detection of guanidinium ions (ppm range), partic. In protein-contg. solns. purified using GuHC1, and also has therapeutic applns.

Proteins may also be used to induce or block biological function. (Note: Revised entry submitted to correct the patent number format of US Government-owned NTIS applications to prevent clashes with ongoing US granted patent numbers. For further information please visit the Derwent web site at www.derwent.com/dwpi/updates/ntis us.html.) (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human bone matrix DNA and proteins - used in detection, diagnosis and treatment involving skeletal and/or connective tissue disease states.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Page ?; ?pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an assay for the diagnosis or assessment of the severity of osteoarthritis or rheumatoid arthritis. The assay involves measuring (in a biological sample) the amount or presence of an isomerised or optically inverted protein or one or more isomerised or optically inverted fragments from proteins such as perlecan, biglycan, decorin, fibrillin-1 or protocadherin. The assay is useful for the diagnosis or assessment of the severity of osteoarthritis or rheumatoid arthritis. The present sequence is human decorin protein.

The resulting fusion proteins were useful for inhibiting the activity a cell regulatory factor, esp. TGF-beta, and hence for treating conditions associated with over-activity of the growth factor such

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Active fragments of decorin (full-length coding sequence AAQ50046) were generated by PCR and fused to Maltose Binding Protein. The resulting fusion proteins were useful for inhibiting the activity a cell regulatory factor, esp. TGP-beta, and hence for treating conditions associated with over-activity of the growth factor such as certain tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     leucine-rich repeat; proteoglycan; cell regulatory factor; MBP; fusion protein; maltose binding protein; tumour growth; inhibit decorin; PG-II; PG-40; transforming growth factor-beta; TGF-bet

                                                                                                                                                                                                                                                                                                                                                                                                                                    neurotrophic activity for brain neurons. Recombinant biglycan, obtd. by expression of encoding CDNA (ATOB9768) in eukaryotic host cells, can be used to enhance the survival and maintain the structure and function of CNS neurons during normal ageing as well as after pathological and/or traumatic nervous system damage. It can also be used to restore function following nervous system lesions and degenerative diseases, and to improve learning efficiency and memory in the elderly and in patients with dementia.

                                                                                                                                                                                                                                                                                                                                                                                                                                        CC complexes (DAPCs) on the surface of a cell or activating a postsynaptic complexes (DAPCs) on the surface of a cell or activating a postsynaptic cc membrane of a cell that comprises contacting the cell with an effective amount of biglycan. A composition comprising biglycan or its portion cc is useful for treating or preventing a condition associated with abnormal CDAPC in cells, characterized by breakdown of muscle cell membrane, which circludes muscular dystrophies, such as Duchenne's, Becker's, Congenital, CC Limb-girdle muscular dystrophy and mytonic dystrophy and a condition cc characterized by abnormal neuromuscular junction or synapse, such as CC neuromuscular or neurological diseases in a subject. Neurological cc disorders, include polymyositis and Alzheimer's disease. Biglycan is also CC useful for preventing and treating smooth muscle disorders, such as CC cardiac myopathies and for treating and inhibiting infections of cells by CC microorganisms e.g. viruses. Agents that modulate the activity of CC DAG-125, identified by the methods are useful in the prophylactic and CC unstable DAPC or an inappropriate formation of a postsynaptic cunstable DAPC or an inappropriate formation of a postsynaptic of constable cell or tissue culture and, tissues can be incubated in vitro CC with biglycan to reverse tissue atrophy and to improve their growth or constable coll in vitro. The present sequence represents the human biglycan.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human biglycan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABR39564;
                                               The invention relates to stabilizing collagen VI-dependent dystrophin-
associated protein complexes (DAPCs) on the surface of a cell. The
method involves contacting the cell with biglycan therapeutic. The method
is useful for preparing a composition for treating neuromuscular or
neurological disease. The present sequence represents a human biglycan
                                                                                                                                                                                                                                                                     Stabilizing collagen VI-dependent dystrophin-associated protein complexes on the surface of a cell for preparing a composition for treating neuromuscular or neurological disease by contacting the cell with biglycan therapeutic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                is afflicted with breast cancer. The method comprises comparing the level of expression of a marker (gene/polypeptide see ACC50076 to ACC50334 and ABR47386 to ABR47632) in a patient sample and the normal level of expression of the marker in a control non-breast cancer sample, where a significant increase in the level of expression of the marker in the patient is an indication that the patient is afflicted with breast cancer. The breast cancer associated sequences from the present invention have cytostatic activities and can be used in gene therapy. The method is useful for diagnosing and treating breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            N.B. The sequence data for this patent did not specification, but was obtained in electronic f at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a method for assessing whether a patient is afflicted with breast cancer. The method comprises comparing the level of expression of a marker (come/nolumentia)

The assay involves measuring (in a biological sample) the amount or presence of an isomerised or optically inverted protein or one or more isomerised or optically inverted fragments from proteins such as perlecan, or optically inverted fragments from proteins such as perlecan, biglycan, decorin, fibrillin-1 or protocadherin. The assay is useful for the diagnosis or assessment of the severity of osteoarchritis or rheumatoid arthritis. The present sequence is human biglycan protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 An assay for the diagnosis or assessment of the severity of osteoarthritis or rheumatoid arthritis comprising detecting isomerized or optically inverted protein in a sample -

It can be used to enhance the survival and maintain the structure and function of CNS neurons during normal ageing as well as after pathological and/or traumatic nervous system damage. It can also be used to restore function following nervous system lesions and degenerative diseases, and to improve learning efficiency and memory in the elderly and in patient with armore.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Proteoglycan cpds., partic. chondroitin sulphate proteoglycan(s) for maintain structural and function of the CNS and attenuating memory deficit(s) in the elderly and patients with dementia

It can be used to enhance the survival and maintain the structure and function of CNS neurons during normal ageing as well as after pathological and/or traumatic nervous system damage. It can also be used to restore function
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Key

                                                                                                                           밁
                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                        The invention relates to the inhibition of transforming growth CC factor-beta (TGF-beta) activity involving contacting TGF-beta with a CC purified polypeptide comprising leucine-rich amino acid sequence of a CC member of decorin superfamily of mammalian proteoglycans. The following activities can be attributed to the polypeptide of the invention:
CC cytostatic, nephrotropic, antirheumatic, antiarthritic, vasotropic, antiarteriosclerotic, hepatotropic, cardiant, dermatological and CC vulnerary. Polypeptides of the invention act as transforming growth factor-beta (TGF-beta) binder. The polypeptides of the invention can be CC disease by a transforming growth factor-beta (TGF-beta) binder. The polypeptides of the invention can be CC caused by a transforming growth factor-beta (TGF-beta) regulated CC disease, glomerulonephritis, rheumatoid arthritis, arteriosclerosis, adult respiratory distress syndrome, cirrhosis of liver, fibrosis of lungs, post-myocardial infarction, cardiac fibrosis, post-angioplasty conditions such as keloids and scarring resulting from burn injuries; other investive skin injuries and reconstructive surgery. The wounds CC conditions such as keloids and scarring resulting from burn injuries; other investive skin injuries and reconstructive surgery. The wounds CC reated with the polypeptide, particularly decorin exhibit no detectable scarring, and are histologically normal. The current sequence represents

                                                                                                                                                           Probes and Abs raised to the proteins can be used to determine their levels useful in diagnosis of associated conective tissue diseases states such as osteoporosis, osteo/rheumatoid arthritis, paget's disease, artherosclerosis and periodontal disease. Proteins may also be used to induce or block biological function. (Note: Revised entry submitted to correct the patent number format of US Government-owned NTIS applications to prevent clashes with ongoing US granted patent numbers. For further information please visit the Derwent web site at www.derwent.com/dwpi/updates/ntis_us.html.) (Updated on 25-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Osteoporosis; rhe atherosclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human bone matrix DNA and proteins - used in detection, diagnosis and treatment involving and/or connective tissue disease states.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 1990-178641/23.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       03-NOV-1989;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAR05159 standard; protein; 368

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAR42264;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAR42264
                                             Active fragments of decorin (full-length coding sequence AAQ50046) were generated by PCR and fused to Maltose Binding Protein. The resulting fusion proteins were useful for inhibiting the activity of a cell regulatory factor, esp. TGF-beta, and hence for treating conditions associated with over-activity of the growth factor such as certain tumours.
                                                                                                                                                                                                                                                     Cardenas J,

The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources.

CC PRO polypeptides, and to detect the presence of mammalian lung, colon, cc breast, prostate, rectal, cervical or liver tumours by comparing PRO cc polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, the cc proliferation or differentiation of chondrocytes, the proliferation or cartilage, the proliferation of inner ear utricular supporting cells or cof T-lymphocytes, the release of a cytokine from peripheral blood comoncytes (PBNCs), or the proliferation of endothabital cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide co factor VIIA. The PRO polypeptides can be used in assays to identify colourer idea can be insed to concerns a polymentides encoding colourer idea can be insed to concerns a polymentides

                                                                                                                                                                                                                             The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The present sequence is a PRO protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                 Baker KP, Ferrara N,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic activities, and can be used in gene therapy. The PRO polynucleotides, proteins, agonists and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restensosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophiabitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO polynucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABL88259 to ABL88267 represent primers and probes used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               One hundred and eighty seven nucleic acids encoding PRO polynuseful in diagnosis and treatment of cardiovascular (e.g. myinfarction), endothelial or angiogenic disorders in a mammal

        The present invention relates to the isolation of novel human PRO CC polypeptides, and the polymucleotide sequences encoding them. The CR polypeptides are secreted and transmembrane proteins. The PRO CC polypeptides are useful for detecting other PRO polypeptides, for CC linking bioactive molecules to cells expressing PRO polypeptides, for CC for modulating biological activities of cells expressing PRO polypeptides, core polypeptides, and for for identifying agonists or antagonists. CC the PRO polypeptides are useful for for stimulating the release of tumour necrosis factor (TNF)-alpha from human blood, for stimulating the proliferation or differentiation of chondrocytes, and detecting the presence of tumours. The polymucleotide sequences encoding PRO CC polypeptides are useful as hybridisation probes, in chromosome and CC gene mapping, in the generation of antisense RNA and DNA, in the greence of the prolypeptides, for generating transgenic animals or CC knockout animals, for the genetic analysis of individuals with genetic disorders, and in gene therapy. ABU66570-ABU66844 represent the human CR PRO polypeptides of the invention.

CC comparation of the propertion of the sequence data for this patent was obtained in electronic comparation for the USPRO web site at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        02-JUN-2000; 2000WO-US15264.

The invention relates to an isolated nucleic acid comprising, or which is cat least 80% identical to, or the full-length coding sequence of, any of the 275 nucleotide sequences, encoding the corresponding PRO polypeptide come of 275 secreted or transmembrane proteins). The nucleic acid come of 275 secreted or transmembrane proteins. The nucleic acid come of 275 secreted or transmembrane proteins. The nucleic acid come of 275 secreted or transmembrane proteins. The nucleic acid come of 275 secreted or transmembrane proteins. The nucleic acid come of 275 secreted or transmembrane proteins. The nucleic acid come of 275 secreted or the DNA deposited come of the calls of the proliferation of the proliferation of the proliferation of the calls, the release of the proliferation of the proliferation of the calls, the release of the proliferation of the proliferation of the calls, the release of the proliferation of the proliferation of the calls, the release of the proliferation of the properties of the proliferation of the properties of the uptake of glucose or free fatty acid (FFA) by skeletal muscle cells, the release come of the defect of the nucleotide sequences of the defect of the proliferation of adipocyte cells, a method for detecting the uptake of the defect of the proliferations. The nucleic and and an oligonucleotide probe derived the probe derived the probe derived the probe derived the proliferations. The nucleic acids are useful as hybridisation or the proliferation of the proliferation of the proliferation or bioreactors. Both are useful in tissue typing.

The present sequence represents a PRO protein of the invention.
                                                                                S

```
The invention relates to an isolated human PRO polypeptide and the polymucleotide encoding it. The PRO polypeptides and nucleic acids are cuseful in diagnosing or treating neurodegenerative disorders such as Alzheimer's disease or Parkinson's disease, and neural damage, e.g. due to trauma or after chemotherapy, inflammatory disease, organ failure, captured at the consist the complications and mutations in general. The gaing, AIDS, diabetic complications and mutations in general. The captured aging, AIDS, diabetic complications and mutations in general. The complete same useful for diagnosing tumours, or for inhibiting the growth of tumour cells. The polypeptides are also useful for wound the healing and associated therapies concerned with re-growth of tissue. The polypeptides are also useful in generating antisense RNA and DNA. PRO cutofic sequences may be used as hybridisation probes in concerned concerned acids are also useful in preparing PRO polypeptides, in assays to identify other proteins or molecules involved in binding reactions, and to generate transgenic or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents for chromosome identification and tissue typing. The PRO sequences are also useful in gene therapy and as molecular weight markers for protein celectrophoresis purposes. Sequences ABU67121-ABU67136 represent human PRO polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

and Novel isolated el isolated PRO polypeptides e.g., PRO826, PRO1068, PRO1184, PRO1346 PRO1375, which stimulate proliferation of stimulated T-lymphocytes therapeutically useful for enhancing immune response and in cancer

Claim 12; Fig 328; 659pp; English.

invention describes an isolated human PRO polypeptide. The PRO

CC useful for treating cardiac insufficiency disorders. PRO1136 and PRO1186 CC stimulate adrenal cortical capillary endothelial growth, and PRO336, CC PRO343, PRO828, PRO826, PRO1068 or PRO355, PRO826, PRO819, PRO8126, PRO819, PRO819, PRO8196, PRO819, PRO8196, PRO polypeptides are useful in detecting PRO polypeptides in a sample, in linking a bloactive molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus useful for treating cardiac insufficiency disorders. PRO1154 and PRO1186 Sequence proliferation and/or redifferentiation of chondrocytes in culture are thus useful for treating sports injuries, and arthritis. This is the amino acid sequence of a novel human PRO protein. 379 AA;
